

Researching Boundary Case Law and Resources for Surveyors

- ***Do you wonder if a decided case in the courts may hold relevance for a boundary retracement problem that you are facing?***
- ***Do you want to know how to search open access databases for cases that have been reported?***
- ***Are you interested in knowing if there is relevant material from other jurisdictions in the world that speaks to your survey of a boundary?***

This webinar presented by Izaak de Rijcke is for surveyors across Canada interested in learning about researching case law for boundary principles. Textbooks may be out-of-date and only give a snapshot of the state of law at a point in time — but you can go directly to the source and legal authorities to access resources found online in legislation, regulations and reported cases. Topics covered in this 1-hour webinar include:

- finding open-access case law databases;
- using search parameters that yield relevant results;
- reviewing a variety of case law databases and legislation for legal information and principles that may give guidance in your work.

In addition to providing a demonstration of several case law searches, this webinar will:

- introduce research techniques;
- provide an online guide of basic concepts to understand what is authoritative, under appeal, or relevant;
- increase your confidence by providing the tools to conduct your own literature, case law and legislation research.
